Hazardous Weather

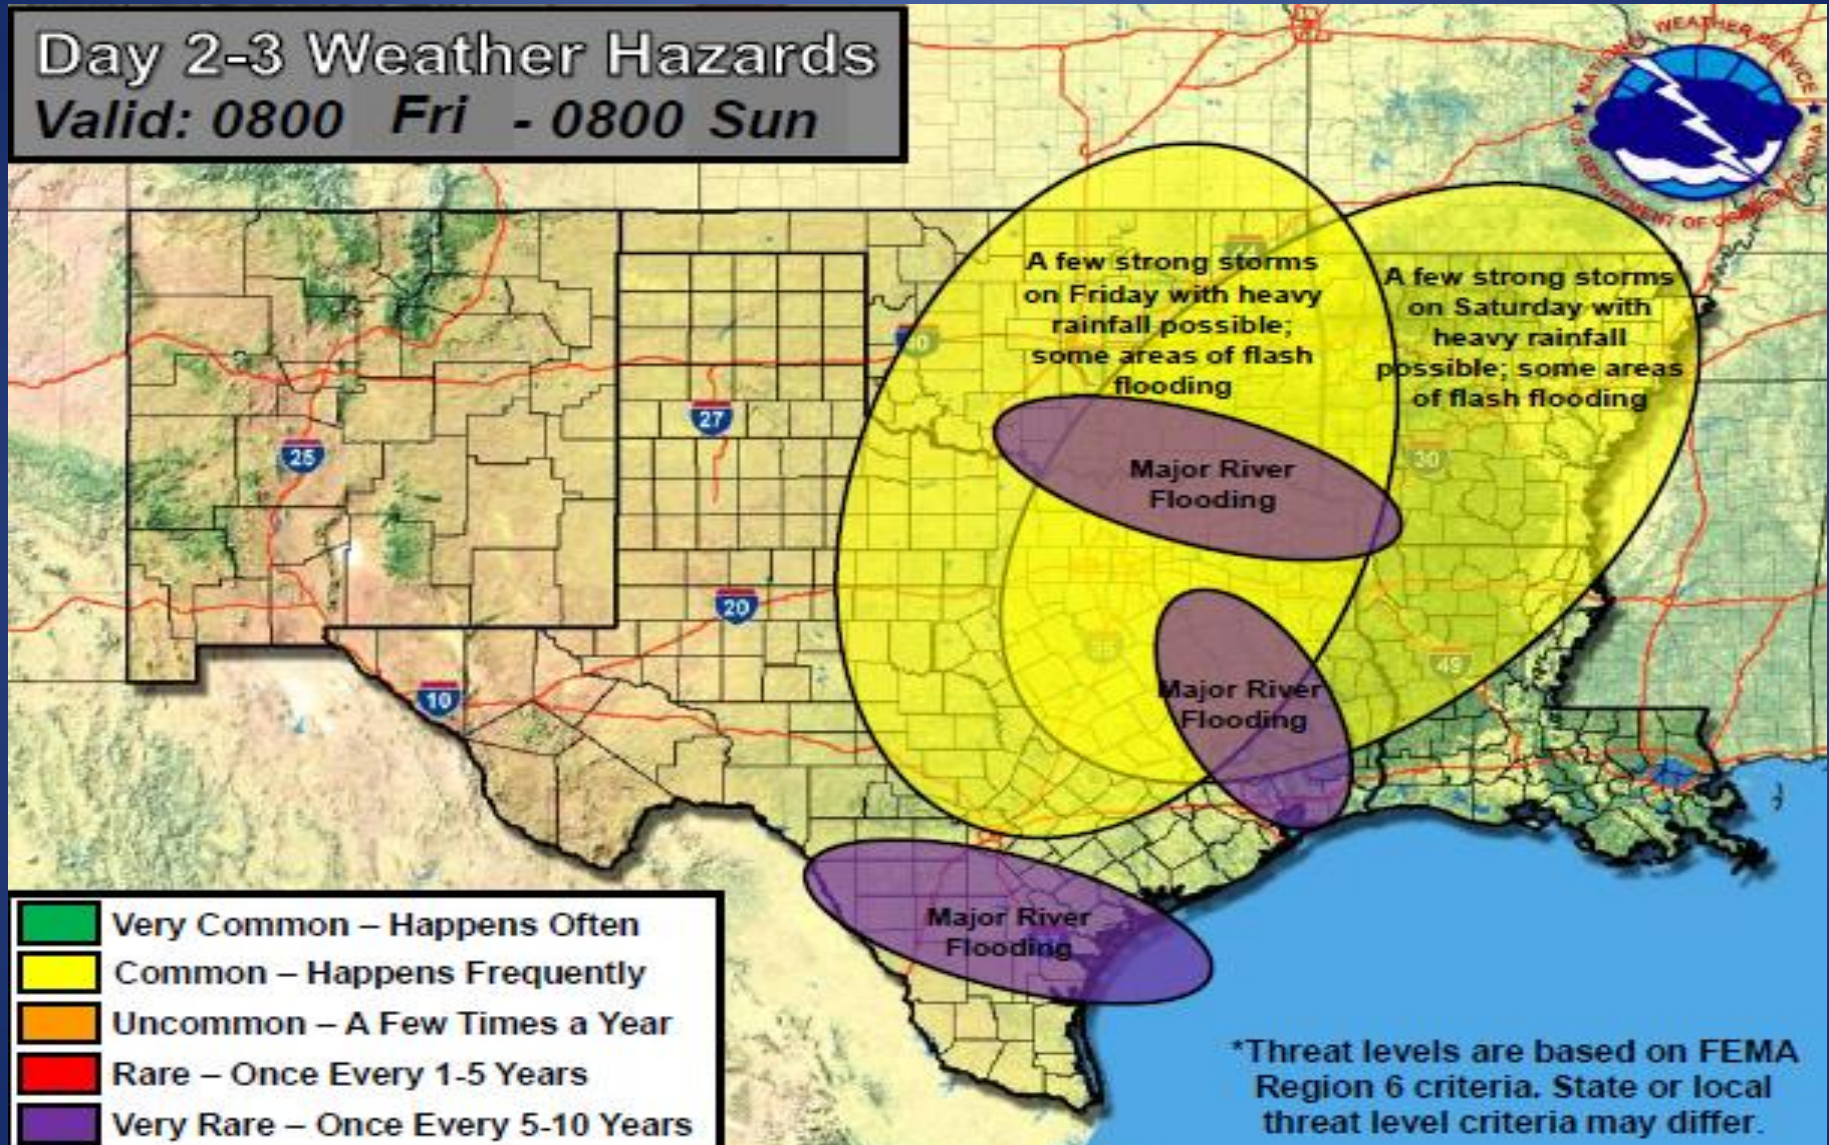

Day 1 Weather Hazards
Valid: 0800 Thu - 0800 Fri

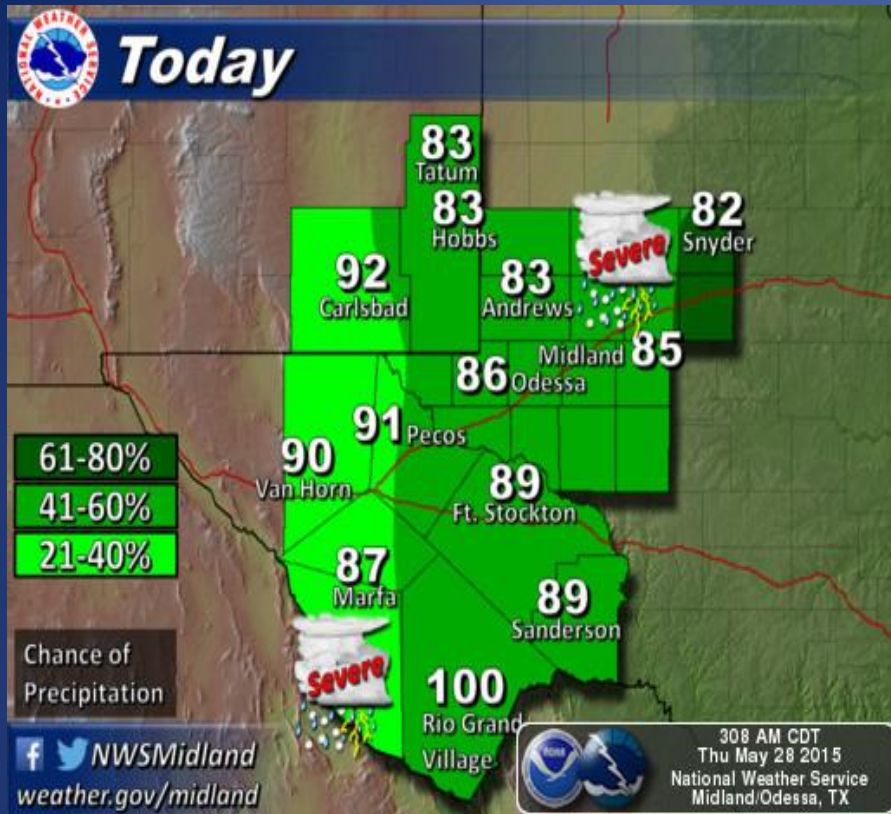

Hazardous Weather

Day 2-3 Weather Hazards

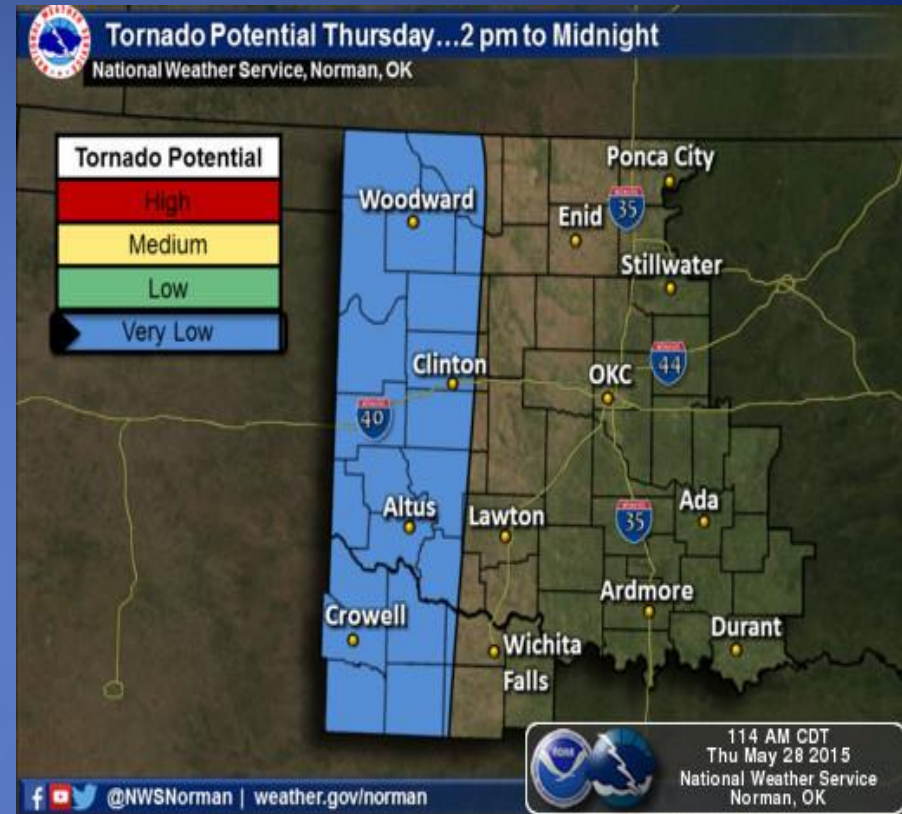

Valid: 0800 Fri - 0800 Sun

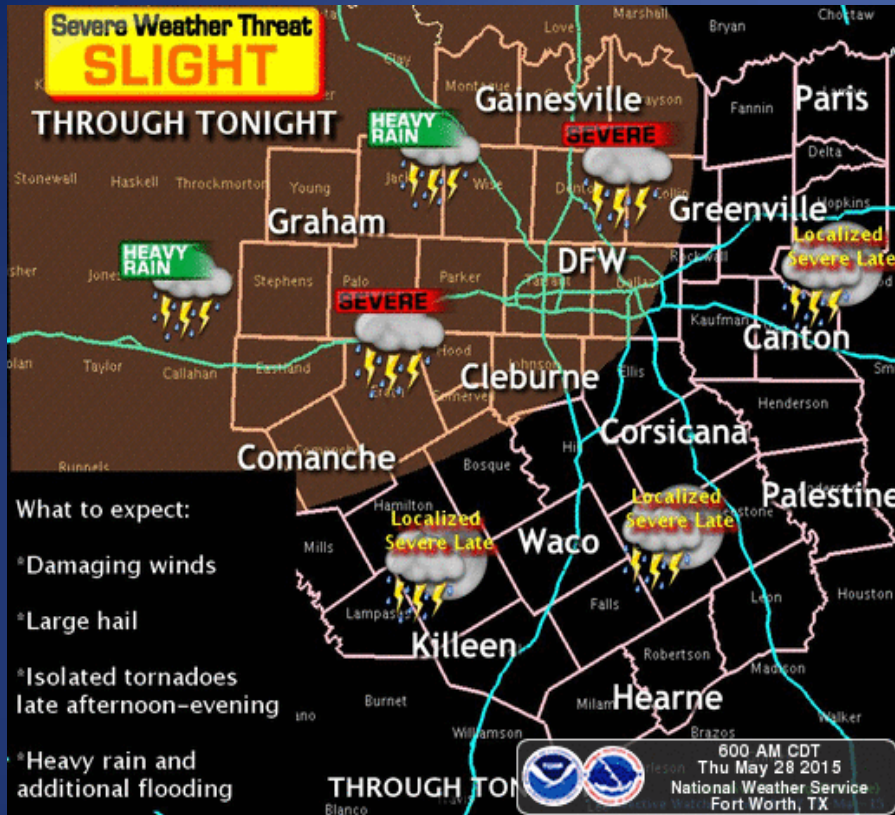

Hazardous Weather

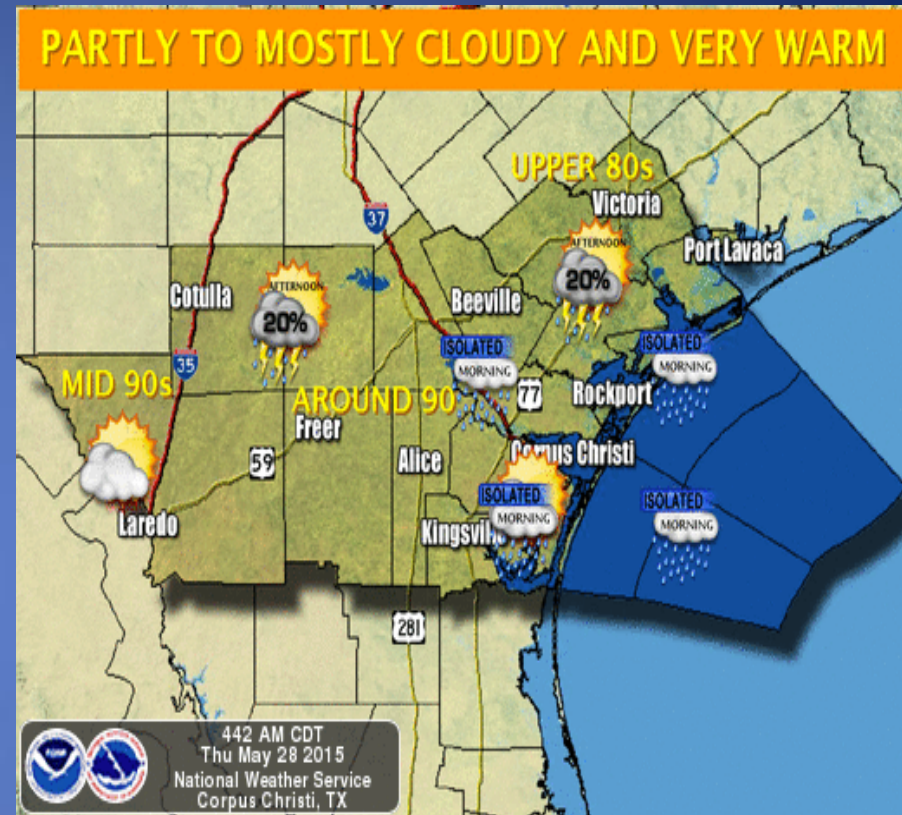

Thunderstorms will be possible again today and tonight, especially over the upper Colorado River valley. Any storms that do develop will be accompanied by frequent lightning, small hail, gusty winds, and very heavy rainfall. A few storms may become severe, producing large hail and damaging winds.

Hazardous Weather

Upper level disturbances will continue to affect the area through tonight. This morning's disturbance and associated storms are not expected to be severe. However, beginning late this afternoon in the far northwest, and continuing overnight will be the risk for more severe storms, especially across the northwest half of the area. All modes of severe weather will be possible, including large hail, damaging winds, and tornadoes. Flash flooding will also be a high end threat due to excessive recent rainfall with any slow-moving storms or training of storms over a particular area.

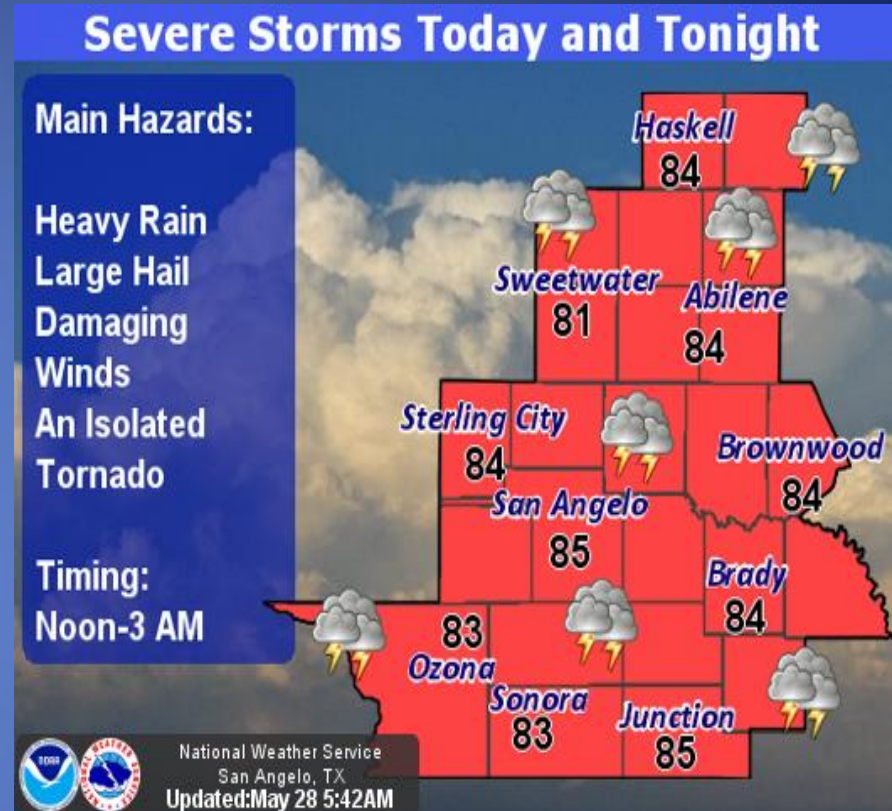

Skies will be mostly cloudy through much of the day then becoming partly cloudy across portions of South Texas this afternoon. A few weak showers can be expected during the morning hours across the eastern areas, then by this afternoon there is a slight chance of showers and thunderstorms across the northern areas of South Texas. Highs will range from the upper 80s along the coast to mid 90s along the Rio Grande. A weak to at times moderate Southeast wind can be expected through this afternoon.

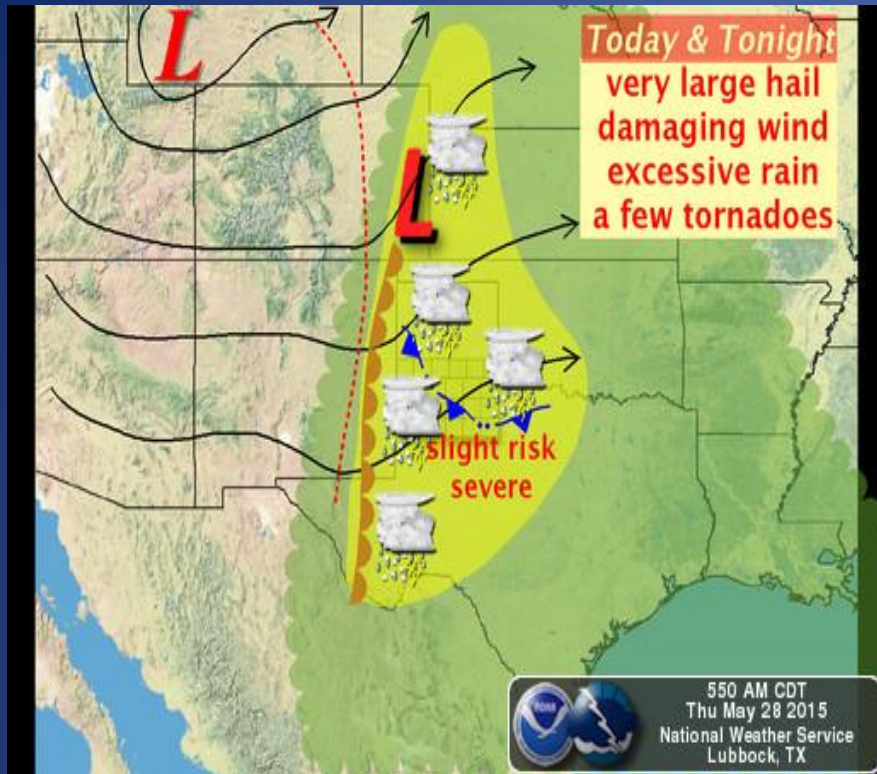

Hazardous Weather

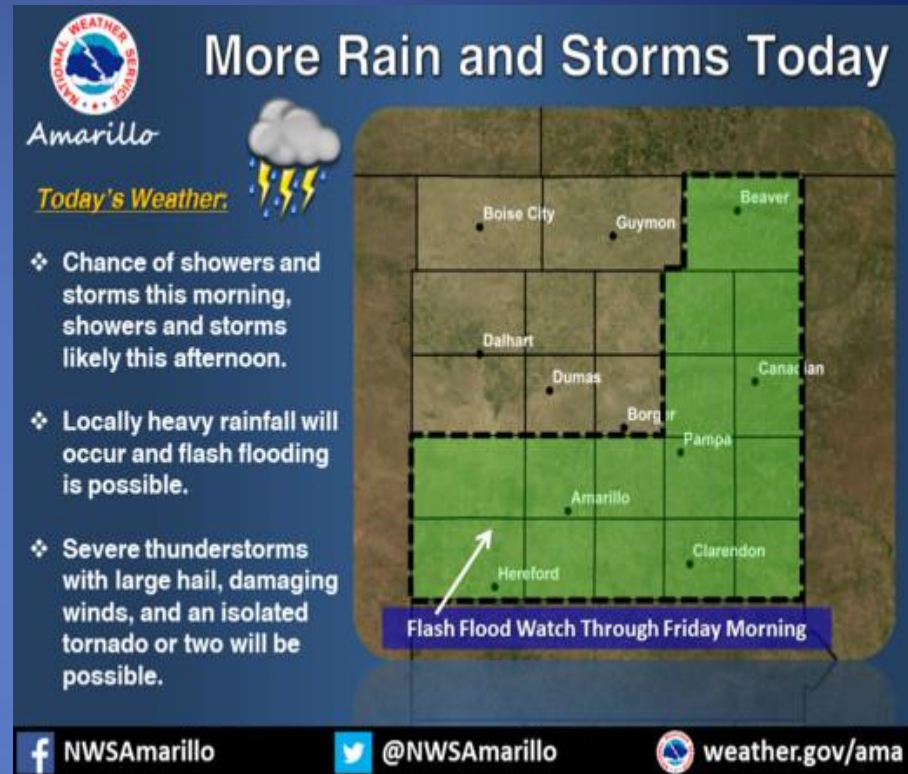

We will see partly to mostly cloudy skies with isolated to scattered showers and thunderstorms today. Some storms could be severe over the northwestern counties producing large hail and damaging winds. High temperatures will range from the middle 80s to lower 90s.

Hazardous Weather

Today and tonight bring a risk for severe thunderstorms and flooding. Be ready for changing conditions and listen for updated forecasts.

Showers and thunderstorms will increase in coverage today across the Texas and Oklahoma panhandles. Locally heavy rainfall could cause flash flooding, especially across the southern and eastern sections of the area. Severe thunderstorms with large hail, damaging winds and an isolated tornado or two will be possible.

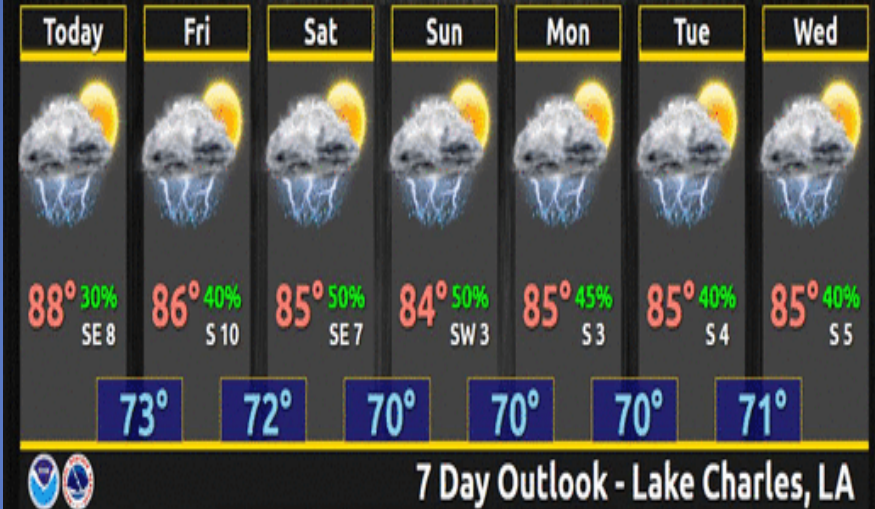

Hazardous Weather

Regional Outlook 05/28/2015

Scattered afternoon showers and thunderstorms
